Designing

REALITY

Water Transfer Printing film is to print various types of patterns on water-soluble PVA. More than thousands of different patterns have been developed, including wood grain, carbon fiber, stone, metal, designing and camouflage.

Automatic Dipping System

Continuously Flow Dipping Machine is a very excellent system to make high daily quantity of 1600 fixture / 8 hours. By its perfect design of adjustable triangle transmission system, this unit is capable to work with various shape of decoration in different angle adjustment.

JK-350TT Continuously Flow Dipping Machine with Tri-con System	Capacity	1600 fixtures/8hrs.
	Dimension	6000 x 1800 x 1800mm
	Weight	2600kgs
	Power	30.05kw
	Dipping Size	600 x 1000mm

Semi-Auto Dipping System

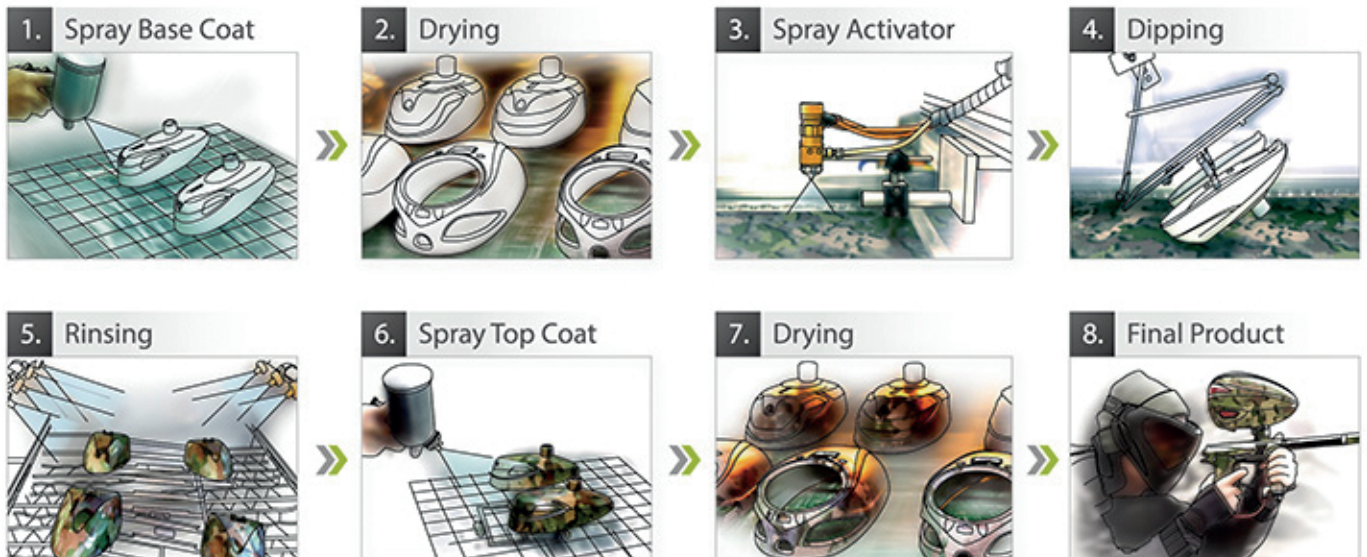

Manually or vertically dipping by production arm with timing and temperature controlled dipping tank. High durability of tank structure with heavy loading production arm and water circulation by dual filters system are the best working tool for your Water Transfer Printing business.

YHT-220A 1M Semi-Automatic Dipping Machine with Production Arm	Capacity	160 fixtures/8hrs
	Dimension	1700 x 1350 x 2500mm
	Weight	350kgs
	Power	19kw
	Working Size	900 x 600mm

2M, 3M and tailor-made machine are available upon request

Water Transfer Printing Process

Typical Application

Water Transfer Printing technology can be applying to products with complex shapes, turning a wide range of surface decoration and making your concepts into REALITY. The applications surround your life more than you can imagine. The possibilities are unlimited..
